

BEE FRIENDLY

ACT FOR
BEES

Many of the plants we use for food rely on bees for pollination: fruit, nuts, vegetables, seeds and livestock feed. Pollination also creates food for birds and small mammals. Bees and other pollinators are in serious trouble due to toxic pesticides, herbicides, and modern agricultural practices.

Each of us can make a difference through bee friendly plantings and using alternatives to toxic pesticides in our gardens, schools, businesses and public spaces.

Download our free **'Love Food? Love Bees!'** curriculum units for Early Learning, Year 5/6 and Year 9/10 created with Cool Australia and National Curriculum aligned.
